Skills

- **Languages:** Python, Java, SQL
- **AI & Machine Learning:** PyTorch, Transformers, Deep Learning, DQN, Computer Vision, NLP, RAG, OpenCV
- **Libraries & Frameworks:** Scikit learn, Pandas, NumPy, LangChain, ChromaDB, FastAPI
- **Developer Tools:** Docker, Git, GitHub, Cuda, Jupyter Notebook, VS Code

Work Experience

ML Engineer intern | Sparks to ideas, Ahmedabad

May 2025 - July 2025

- Gained practical experience with NumPy, Pandas, Scikit learn, and Matplotlib through hands-on ML exercises.
- Applied data preprocessing, feature engineering, and visualization techniques on sample datasets.
- Implemented and evaluated introductory machine learning models under mentor guidance.

Python intern | Ramora Technologies, Rajkot

June 2024 – June 2024

- Learned core Python programming concepts including loops, functions, file handling, and object oriented programming.
- Applied Python fundamentals by solving supervised coding assignments and debugging exercises.
- Built beginner level Python programs following structured development practices.

Projects

SnakeSense | [GitHub](#)

Skills: RAG, PyTorch, FastAPI, LLMs, ChromaDB

- Trained an EfficientNet-BO classifier on 15 medically significant Indian snake species, achieving 87% top-3 test accuracy with sub-100ms GPU inference via a FastAPI backend.
- Built a ChromaDB + Groq retrieval system delivering trilingual (English/Hindi/Gujarati) responses strictly grounded in WHO/NCDC clinical guidelines to reduce hallucination risk.
- Designed a rule-based triage engine (independent of the LLM) mapping symptom input to WHO/NCDC - aligned urgency classification for auditable, reproducible safety decisions.

AI Powered Dialogue Summarizer | [GitHub](#)

Skills: Python, Hugging Face Transformers, PyTorch, FastAPI

- Fine tuned a T5 Transformer model for abstractive dialogue summarization using the SAMSum dataset.
- Developed a FastAPI REST API with an interactive web interface to generate summaries from user provided text.
- Implemented text preprocessing, tokenization, beam search decoding, and GPU/CPU device selection for efficient inference.
- Integrated Hugging Face Transformers and PyTorch to deploy an end to end NLP application.

Review Authenticity and Sentiment Analysis | [GitHub](#)

Skills: Python, Machine learning, NLP

- Designed and implemented an end-to-end ML pipeline to detect potentially fake reviews and perform sentiment analysis on genuine reviews using NLP techniques.
- Applied TF IDF for text feature extraction and trained linear classification models to analyse large scale review datasets under real world data constraints.
- Achieved 87 percent accuracy in sentiment classification using TF IDF features and linear models.

Education

A.V. Parekh Technical Institute Rajkot

Diploma in Computer Engineering | 8.67 CGPA

Certifications

- Complete AI and Machine Learning, Data Science Bootcamp | Udemy, 2026
- Finishing School Program, Grade A+ | Knowledge Consortium of Gujarat, 2026
